PMICNTR_EL0, Performance Monitors Instruction Counter Register

The PMICNTR_EL0 characteristics are:

Purpose

If event counting is not prohibited and the instruction counter is enabled, the counter increments for each architecturally-executed instruction, according to the configuration specified by PMICFILTR_EL0.

Configuration

AArch64 System register PMICNTR_EL0 bits [63:0] are architecturally mapped to External register PMU.PMICNTR_EL0[63:0].

This register is present only when FEAT_PMUv3_ICNTR is implemented. Otherwise, direct accesses to PMICNTR_EL0 are undefined.

Attributes

PMICNTR_EL0 is a 64-bit register.

ICNT, bits [63:0]

Instruction Counter.

The reset behavior of this field is:

- On a Warm reset, this field resets to an architecturally unknown value.

Accessing PMICNTR_EL0

PMICNTR_EL0 treats permitted reads-as-zero and ignores permitted writes if all of the following are true:

- PSTATE.EL == EL0.
- PMUACR_EL1.F0 == 0.

PMICNTR_EL0 ignores permitted writes if all of the following are true:

- PSTATE.EL == EL0.
- PMUSERENR_EL0.IR == 1.

Accesses to this register use the following encodings in the System register encoding space:

MRS <Xt>, PMICNTR_EL0
