TLBI ALLE3IS, TLBI ALLE3ISNXS, TLB Invalidate All, EL3, Inner Shareable

The TLBI ALLE3IS, TLBI ALLE3ISNXS characteristics are:

Purpose

If EL3 is implemented, invalidates cached copies of translation table entries from TLBs that meet all the following requirements:

- The entry is a stage 1 translation table entry, from any level of the translation table walk.
- The entry would be required to translate an address using the EL3 translation regime.

The invalidation applies to all PEs in the same Inner Shareable shareability domain as the PE that executes this System instruction.

If FEAT_XS is implemented, the nXS variant of this System instruction is defined.

Both variants perform the same invalidation, but the TLBI System instruction without the nXS qualifier waits for all memory accesses using in-scope old translation information to complete before it is considered complete.

The TLBI System instruction with the nXS qualifier is considered complete when the subset of these memory accesses with XS attribute set to 0 are complete.

Configuration

There are no configuration notes.

Attributes

TLBI ALLE3IS, TLBI ALLE3ISNXS is a 64-bit System instruction.

Field descriptions

This instruction has no applicable fields.

The value in the register specified by <Xt> is ignored.

Executing TLBI ALLE3IS, TLBI ALLE3ISNXS

The Rt field should be set to `0b11111`. If the Rt field is not set to `0b11111`, it is constrained unpredictable whether:

- The instruction is undefined.
- The instruction behaves as if the Rt field is set to `0b11111`.

Accesses to this instruction use the following encodings in the System instruction encoding space:
