MOV (element)

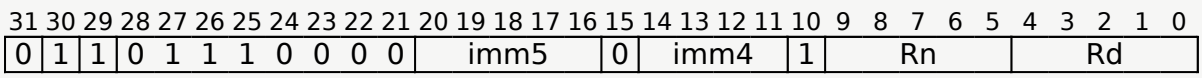
Move vector element to another vector element. This instruction copies the vector element of the source SIMD&FP register to the specified vector element of the destination SIMD&FP register.

This instruction can insert data into individual elements within a SIMD&FP register without clearing the remaining bits to zero.

Depending on the settings in the *CPACR_EL1*, *CPTR_EL2*, and *CPTR_EL3* registers, and the current Security state and Exception level, an attempt to execute the instruction might be trapped.

This is an alias of INS (element). This means:

- The encodings in this description are named to match the encodings of INS (element).
- The description of INS (element) gives the operational pseudocode, any constrained unpredictable behavior, and any operational information for this instruction.



```
MOV <Vd>.<Ts>[<index1>], <Vn>.<Ts>[<index2>]
```

is equivalent to

```
INS <Vd>.<Ts>[<index1>], <Vn>.<Ts>[<index2>]
```

and is always the preferred disassembly.

Assembler Symbols

<Vd> Is the name of the SIMD&FP destination register, encoded in the "Rd" field.

<Ts> Is an element size specifier, encoded in “imm5”:

imm5	<Ts>
x0000	RESERVED
xxxx1	B
xxx10	H
xx100	S
x1000	D

<index1>
Is the destination element index encoded in “imm5”:

imm5	<index1>
x0000	RESERVED
xxxx1	imm5<4:1>
xxx10	imm5<4:2>
xx100	imm5<4:3>
x1000	imm5<4>

<Vn>
Is the name of the SIMD&FP source register, encoded in the "Rn" field.

<index2>
Is the source element index encoded in “imm5:imm4”:

imm5	<index2>
x0000	RESERVED
xxxx1	imm4<3:0>
xxx10	imm4<3:1>
xx100	imm4<3:2>
x1000	imm4<3>

Unspecified bits in "imm4" are ignored but should be set to zero by an assembler.

Operation

The description of INS (element) gives the operational pseudocode for this instruction.

Operational information

If PSTATE.DIT is 1:

- The execution time of this instruction is independent of:
  - The values of the data supplied in any of its registers.
  - The values of the NZCV flags.
- The response of this instruction to asynchronous exceptions does not vary based on:
  - The values of the data supplied in any of its registers.
  - The values of the NZCV flags.
