TRBTRG_EL1, Trace Buffer Trigger Counter Register

The TRBTRG_EL1 characteristics are:

Purpose

Specifies the number of bytes of trace to capture following a Detected Trigger before a Trigger Event.

Configuration

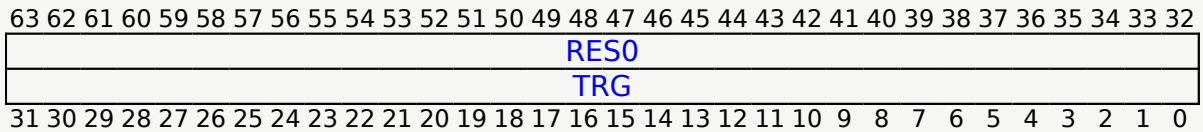
AArch64 System register TRBTRG_EL1 bits [63:0] are architecturally mapped to External register TRBTRG_EL1[63:0] when FEAT_TRBE_EXT is implemented.

This register is present only when FEAT_TRBE is implemented. Otherwise, direct accesses to TRBTRG_EL1 are undefined.

Attributes

TRBTRG_EL1 is a 64-bit register.

Field descriptions



Bits [63:32]

Reserved, res0.

TRG, bits [31:0]

Trigger count.

Specifies the number of bytes of trace to capture following a Detected Trigger before a Trigger Event.

TRBTRG_EL1 decrements by 1 for every byte of trace written to the trace buffer when all of the following are true:

- TRBTRG_EL1 is nonzero.
- TRBSR_EL1.TRG is 1.

The architecture places restrictions on the values that software can write to the counter.

Note

As a result of the restrictions an implementation might treat some of TRG[M:0] as res0, where M is defined by TRBIDR_EL1.Align.

The reset behavior of this field is:

- On a Cold reset, this field resets to an architecturally unknown value.

Accessing TRBTRG_EL1

The PE might ignore a write to TRBTRG_EL1 if any of the following apply:

- TRBLIMITR_EL1.E == 1, and either FEAT_TRBE_EXT is not implemented or the Trace Buffer Unit is using Self-hosted mode.
- TRBLIMITR_EL1.XE == 1, FEAT_TRBE_EXT is implemented, and the Trace Buffer Unit is using External mode.

Accesses to this register use the following encodings in the System register encoding space:

MRS <Xt>, TRBTRG_EL1
