

PMCNTENCLR_EL0, Performance Monitors Count Enable Clear Register

The PMCNTENCLR_EL0 characteristics are:

Purpose

Disables the Cycle Count Register, [PMCCNTR_EL0](#), and any implemented event counters [PMEVCNTR<n>_EL0](#). Reading this register shows which counters are enabled.

Configuration

AArch64 System register PMCNTENCLR_EL0 bits [31:0] are architecturally mapped to AArch32 System register [PMCNTENCLR\[31:0\]](#).

AArch64 System register PMCNTENCLR_EL0 bits [31:0] are architecturally mapped to External register [PMU.PMCNTENCLR_EL0\[31:0\]](#).

AArch64 System register PMCNTENCLR_EL0 bits [63:32] are architecturally mapped to External register [PMU.PMCNTENCLR_EL0\[63:32\]](#) when FEAT_PMUv3_EXT64 is implemented.

This register is present only when FEAT_PMUv3 is implemented. Otherwise, direct accesses to PMCNTENCLR_EL0 are undefined.

Attributes

PMCNTENCLR_EL0 is a 64-bit register.

Field descriptions

63	62	61	60	59	58	57	56	55	54	53	52	51	50	49	48	47	46	45	44	43	42	41	40	39	38	37	36

Bits [63:33]

Reserved, res0.

F<m>, bit [m+32], for m = 0

When FEAT_PMUV3_ICNTR is implemented:

Fixed-function counter <m> disable. On writes, allows software to disable fixed-function counter <m>. On reads, returns the fixed-function counter <m> enable status.

F<m>	Meaning
0b0	Fixed-function counter <m> disabled.
0b1	Fixed-function counter <m> enabled.

PMCNTENCLR_EL0.F0 holds the enable status for [PMICNTR_EL0](#).

Accessing this field has the following behavior:

- This field reads-as-zero if all of the following are true:
 - Any of the following are true:
 - EL3 is implemented and [SCR_EL3](#).FGTEn2 == 0.
 - [HDFGRTR2_EL2](#).nPMICFILTR_EL0 == 0.
 - FEAT_FGT2 is implemented.
 - EL2 is implemented and enabled in the current Security state.
 - Accessed at EL1 or EL0.
 - [HCR_EL2](#).{E2H,TGE} != {1,1}.
- This field reads-as-zero and ignores writes if any of the following are true:
 - All of the following are true:
 - EL3 is implemented.
 - [MDCR_EL3](#).EnPM2 == 0.
 - Accessed at EL2, EL1, or EL0.
 - All of the following are true:
 - [PMUSERENR_EL0](#).UEN == 0 or [PMUACR_EL1](#).F<m> == 0.
 - Accessed at EL0.
- This field ignores writes if any of the following are true:
 - All of the following are true:
 - EL3 is implemented and [SCR_EL3](#).FGTEn2 == 0, or [HDFGWTR2_EL2](#).nPMICFILTR_EL0 == 0.
 - FEAT_FGT2 is implemented.
 - EL2 is implemented and enabled in the current Security state.
 - Accessed at EL1 or EL0.
 - [HCR_EL2](#).{E2H,TGE} != {1,1}.
 - All of the following are true:
 - Accessed at EL0.
 - [PMUSERENR_EL0](#).IR == 1.
- Otherwise access to this field is W1C.

The reset behavior of this field is:

- On a Warm reset, this field resets to 0.

Otherwise:

Reserved, res0.

C, bit [31]

[PMCCNTR_EL0](#) disable. On writes, allows software to disable [PMCCNTR_EL0](#). On reads, returns the [PMCCNTR_EL0](#) enable status.

C	Meaning
0b0	PMCCNTR_EL0 disabled.
0b1	PMCCNTR_EL0 enabled.

Accessing this field has the following behavior:

- This field reads-as-zero and ignores writes if all of the following are true:
 - FEAT_PMuV3p9 is implemented.
 - Accessed at EL0.
 - [PMUSERENR_EL0](#).UEN == 1.
 - [PMUACR_EL1](#).C == 0.
- This field ignores writes if all of the following are true:
 - FEAT_PMuV3p9 is implemented.
 - Accessed at EL0.
 - [PMUSERENR_EL0](#).{UEN,CR} == {1,1}.
- Otherwise access to this field is W1C.

The reset behavior of this field is:

- On a Warm reset, this field resets to an architecturally unknown value.

P<m>, bit [m], for m = 30 to 0

[PMEVCNTR<m>_EL0](#) disable. On writes, allows software to disable [PMEVCNTR<m>_EL0](#). On reads, returns the [PMEVCNTR<m>_EL0](#) enable status.

P<m>	Meaning
0b0	PMEVCNTR<m>_EL0 disabled.
0b1	PMEVCNTR<m>_EL0 enabled.

Accessing this field has the following behavior:

- This field reads-as-zero and ignores writes if any of the following are true:
 - All of the following are true:
 - FEAT_PMUv3p9 is implemented.
 - Accessed at EL0.
 - [PMUSERENR_EL0](#).UEN == 1.
 - [PMUACR_EL1](#).P<m> == 0.
 - All of the following are true:
 - EL2 is implemented and enabled in the current Security state.
 - m >= UInt([MDCR_EL2](#).HPMN).
 - Accessed at EL0 or EL1.
 - m >= UInt([PMCR_EL0](#).N).
- This field ignores writes if all of the following are true:
 - FEAT_PMUv3p9 is implemented.
 - Accessed at EL0.
 - [PMUSERENR_EL0](#).{UEN,ER} == {1,1}.
- Otherwise access to this field is W1C.

The reset behavior of this field is:

- On a Warm reset, this field resets to an architecturally unknown value.

Accessing PMCNTENCLR_EL0

Accesses to this register use the following encodings in the System register encoding space:

MRS <Xt>, PMCNTENCLR_EL0

op0	op1	CRn	CRm	op2
0b11	0b011	0b1001	0b1100	0b010

```
