

TFSR_EL2, Tag Fault Status Register (EL2)

The TFSR_EL2 characteristics are:

Purpose

Holds accumulated Tag Check Faults occurring in EL2 that are not taken precisely.

Configuration

This register is present only when FEAT_MTE2 is implemented. Otherwise, direct accesses to TFSR_EL2 are undefined.

Attributes

TFSR_EL2 is a 64-bit register.

Field descriptions

63	62	61	60	59	58	57	56	55	54	53	52	51	50	49	48	47	46	45	44	43	42	41	40	39	38	37	36	35	34	33	32	
RES0

Bits [63:2]

Reserved, res0.

TF1, bit [1]

Tag Check Fault. Asynchronously set to 1 when a Tag Check Fault using a virtual address with bit[55] == 0b1 occurs.

When [HCR_EL2.E2H](#) == 0b0, this field is res0.

The reset behavior of this field is:

- On a Warm reset, this field resets to an architecturally unknown value.

TF0, bit [0]

Tag Check Fault. Asynchronously set to 1 when a Tag Check Fault using a virtual address with bit[55] == 0b0 occurs.

The reset behavior of this field is:

- On a Warm reset, this field resets to an architecturally unknown value.

Accessing TFSR_EL2

When [HCR_EL2.E2H](#) is 1, without explicit synchronization, access from EL2 using the mnemonic TFSR_EL2 or TFSR_EL1 are not guaranteed to be ordered with respect to accesses using the other mnemonic.

Accesses to this register use the following encodings in the System register encoding space:

MRS <Xt>, TFSR_EL2

op0	op1	CRn	CRm	op2
0b11	0b100	0b0101	0b0110	0b000
