

AMAIR_EL2, Auxiliary Memory Attribute Indirection Register (EL2)

The AMAIR_EL2 characteristics are:

Purpose

Provides implementation defined memory attributes for the memory regions specified by [MAIR_EL2](#).

Configuration

AArch64 System register AMAIR_EL2 bits [31:0] are architecturally mapped to AArch32 System register [HAMAIRO\[31:0\]](#).

AArch64 System register AMAIR_EL2 bits [63:32] are architecturally mapped to AArch32 System register [HAMAIR1\[31:0\]](#).

If EL2 is not implemented, this register is res0 from EL3.

This register has no effect if EL2 is not enabled in the current Security state.

Attributes

AMAIR_EL2 is a 64-bit register.

implementation defined.

The reset behavior of this field is:

- On a Warm reset, this field resets to an architecturally unknown value.

Accessing AMAIR_EL2

When [HCR_EL2.E2H](#) is 1, without explicit synchronization, access from EL2 using the mnemonic `AMAIR_EL2` or `AMAIR_EL1` are not guaranteed to be ordered with respect to accesses using the other mnemonic.

Accesses to this register use the following encodings in the System register encoding space:

MRS <Xt>, AMAIR_EL2

op0	op1	CRn	CRm	op2
0b11	0b100	0b1010	0b0011	0b000
