

## FCPY

Copy 8-bit floating-point immediate to vector elements (predicated)

Copy a floating-point immediate into each active element in the destination vector. Inactive elements in the destination vector register remain unmodified.

This instruction is used by the alias [FMOV \(immediate, predicated\)](#).

|    |    |    |    |    |    |    |    |      |    |    |    |    |    |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |    |
|----|----|----|----|----|----|----|----|------|----|----|----|----|----|----|----|----|----|----|----|----|----|---|---|---|---|---|---|---|---|---|----|
| 31 | 30 | 29 | 28 | 27 | 26 | 25 | 24 | 23   | 22 | 21 | 20 | 19 | 18 | 17 | 16 | 15 | 14 | 13 | 12 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0  |
| 0  | 0  | 0  | 0  | 0  | 1  | 0  | 1  | size | 0  | 1  |    | Pg |    | 1  | 1  | 0  |    |    |    |    |    |   |   |   |   |   |   |   |   |   | Zd |

**FCPY** <Zd>.<T>, <Pg>/M, #<const>

```
if !HaveSVE() && !HaveSME() then UNDEFINED;
if size == '00' then UNDEFINED;
constant integer esize = 8 << UInt(size);
integer g = UInt(Pg);
integer d = UInt(Zd);
bits(esome) imm = VFPEExpandImm(imm8, esize);
```

## Assembler Symbols

<Zd> Is the name of the destination scalable vector register, encoded in the "Zd" field.

<T> Is the size specifier, encoded in "size":

| size | <T>      |
|------|----------|
| 00   | RESERVED |
| 01   | H        |
| 10   | S        |
| 11   | D        |

<Pg> Is the name of the governing scalable predicate register, encoded in the "Pg" field.

<const> Is a floating-point immediate value expressible as  $\hat{A} \pm n \hat{A} \cdot 16 \hat{A} - 2^r$ , where n and r are integers such that  $16 \hat{A} \% n \hat{A} \% 31$  and  $-3 \hat{A} \% r \hat{A} \% 4$ , i.e. a normalized binary floating-point encoding with 1 sign bit, 3-bit exponent, and 4-bit fractional part, encoded in the "imm8" field.

## Operation

```
CheckSVEEnabled();
constant integer VL = CurrentVL;
constant integer PL = VL DIV 8;
```

```

constant integer elements = VL DIV esize;
bits(PL) mask = P[g, PL];
bits(VL) result = Z[d, VL];

for e = 0 to elements-1
    if ActivePredicateElement(mask, e, esize) then
        Elem[result, e, esize] = imm;

Z[d, VL] = result;

```

## Operational information

This instruction might be immediately preceded in program order by a MOVPRFX instruction. The MOVPRFX instruction must conform to all of the following requirements, otherwise the behavior of the MOVPRFX and this instruction is unpredictable:

- The MOVPRFX instruction must be unpredicated, or be predicated using the same governing predicate register and source element size as this instruction.
- The MOVPRFX instruction must specify the same destination register as this instruction.
- The destination register must not refer to architectural register state referenced by any other source operand register of this instruction.
