

AMCNTENSET0_EL0, Activity Monitors Count Enable Set Register 0

The AMCNTENSET0_EL0 characteristics are:

Purpose

Enable control bits for the architected activity monitors event counters, [AMEVCNTR0<n>_EL0](#).

Configuration

AArch64 System register AMCNTENSET0_EL0 bits [31:0] are architecturally mapped to AArch32 System register [AMCNTENSET0\[31:0\]](#).

AArch64 System register AMCNTENSET0_EL0 bits [31:0] are architecturally mapped to External register [AMCNTENSET0\[31:0\]](#).

This register is present only when FEAT_AMUv1 is implemented. Otherwise, direct accesses to AMCNTENSET0_EL0 are undefined.

Attributes

AMCNTENSET0_EL0 is a 64-bit register.

Bits [63:16]

Reserved, res0.

Bits [15:4]

Reserved, RAZ/WI.

This field is reserved for additional architected activity monitor event counters, which Arm might define in a future version of the Activity Monitors architecture.

P<n>, bit [n], for n = 3 to 0

Activity monitor event counter enable bit for [AMEVCNTR0<n>_EL0](#).

Note

[AMCGCR_EL0](#).CG0NC identifies the number of architected activity monitor event counters. In an implementation that includes FEAT_AMUv1, the number of architected activity monitor event counters is 4.

Possible values of each bit are:

P<n>	Meaning
0b0	When read, means that AMEVCNTR0<n>_EL0 is disabled. When written, has no effect.
0b1	When read, means that AMEVCNTR0<n>_EL0 is enabled. When written, enables AMEVCNTR0<n>_EL0 .

The reset behavior of this field is:

- On an AMU reset, this field resets to 0.
