

## TRCCNTRLDVR<n>, Counter Reload Value Register <n>, n = 0 - 3

The TRCCNTRLDVR<n> characteristics are:

### Purpose

This sets or returns the reload count value for Counter <n>.

### Configuration

AArch64 System register TRCCNTRLDVR<n> bits [31:0] are architecturally mapped to External register [TRCCNTRLDVR<n>\[31:0\]](#).

This register is present only when FEAT\_ETE is implemented, FEAT\_TRC\_SR is implemented and  $\text{UInt}(\text{TRCIDR5.NUMCNTR}) > n$ . Otherwise, direct accesses to TRCCNTRLDVR<n> are undefined.

### Attributes

TRCCNTRLDVR<n> is a 64-bit register.

### Field descriptions

63	62	61	60	59	58	57	56	55	54	53	52	51	50	49	48	47	46	45	44	43	42	41	40	39	38	37	36	35	34	33	32
RES0																VALUE															
RES0																VALUE															
31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

#### Bits [63:16]

Reserved, res0.

#### VALUE, bits [15:0]

Contains the reload value for Counter <n>. When a reload event occurs for Counter <n> then the trace unit copies the VALUE<n> field into Counter <n>.

The reset behavior of this field is:

- On a Trace unit reset, this field resets to an architecturally unknown value.

## Accessing TRCCNTRLDVR<n>

Must be programmed if [TRCRSCTLR<a>.GROUP == 0b0010](#) and [TRCRSCTLR<a>.COUNTERS\[n\] == 1](#).

Writes are constrained unpredictable if the trace unit is not in the Idle state.

Accesses to this register use the following encodings in the System register encoding space:

MRS <Xt>, TRCCNTRLDVR<m> ; Where m = 0-3

op0	op1	CRn	CRm	op2
0b10	0b001	0b0000	0b00:m[1:0]	0b101

```
