

## SQDMULH (multiple vectors)

Multi-vector signed saturating doubling multiply high

Multiply then double the corresponding signed elements of the two or four first and second source vectors, and destructively place the most significant half of the result in the corresponding elements of the two or four first source vectors. Each result element is saturated to the N-bit element's signed integer range  $-2^{(N-1)}$  to  $(2^{(N-1)})-1$ .

This instruction is unpredicated.

It has encodings from 2 classes: [Two registers](#) and [Four registers](#)

### Two registers (FEAT\_SME2)

### Assembler Symbols

- <Zdn1>
- For the two registers variant: is the name of the first scalable vector register of a multi-vector sequence, encoded as "Zdn" times 2.
  - For the four registers variant: is the name of the first scalable vector register of a multi-vector sequence, encoded as "Zdn" times 4.

<T>

Is the size specifier, encoded in "size":

size	<T>
00	B
01	H
10	S
11	D

<Zdn4> Is the name of the fourth scalable vector register of a multi-vector sequence, encoded as "Zdn" times 4 plus 3.

<Zdn2> Is the name of the second scalable vector register of a multi-vector sequence, encoded as "Zdn" times 2 plus 1.

<Zm1> For the two registers variant: is the name of the first scalable vector register of a multi-vector sequence, encoded as "Zm" times 2.

For the four registers variant: is the name of the first scalable vector register of a multi-vector sequence, encoded as "Zm" times 4.

<Zm4> Is the name of the fourth scalable vector register of a multi-vector sequence, encoded as "Zm" times 4 plus 3.

<Zm2> Is the name of the second scalable vector register of a multi-vector sequence, encoded as "Zm" times 2 plus 1.

## Operation

```
CheckStreamingSVEEnabled();
constant integer VL = CurrentVL;
constant integer elements = VL DIV esize;
array [0..3] of bits(VL) results;

for r = 0 to nreg-1
    bits(VL) operand1 = Z[dn+r, VL];
    bits(VL) operand2 = Z[m+r, VL];
    for e = 0 to elements-1
        integer element1 = SInt(Elem[operand1, e, esize]);
        integer element2 = SInt(Elem[operand2, e, esize]);
        integer res = 2 * element1 * element2;
        Elem[results[r], e, esize] = SignedSat(res >> esize, esize);

for r = 0 to nreg-1
    Z[dn+r, VL] = results[r];
