

SXTL, SXTL2

Signed extend Long. This instruction duplicates each vector element in the lower or upper half of the source SIMD&FP register into a vector, and writes the vector to the destination SIMD&FP register. The destination vector elements are twice as long as the source vector elements. All the values in this instruction are signed integer values.

The SXTL instruction extracts the source vector from the lower half of the source register. The SXTL2 instruction extracts the source vector from the upper half of the source register.

Depending on the settings in the [CPACR_EL1](#), [CPTR_EL2](#), and [CPTR_EL3](#) registers, and the current Security state and Exception level, an attempt to execute the instruction might be trapped.

This is an alias of [SSHLL, SSHLL2](#). This means:

- The encodings in this description are named to match the encodings of [SSHLL, SSHLL2](#).
- The description of [SSHLL, SSHLL2](#) gives the operational pseudocode, any constrained unpredictable behavior, and any operational information for this instruction.

SXTL{2} <Vd>.<Ta>, <Vn>.<Tb>

is equivalent to

SSHLL{2} <Vd>.<Ta>, <Vn>.<Tb>, #0

and is the preferred disassembly when `BitCount(immh) == 1`.

Assembler Symbols

2

Is the second and upper half specifier. If present it causes the operation to be performed on the upper 64 bits of the registers holding the narrower elements, and is encoded in "Q":

| Q | 2 |
|---|-----------|
| 0 | [absent] |
| 1 | [present] |

<Vd>

Is the name of the SIMD&FP destination register, encoded in the "Rd" field.

<Ta>

Is an arrangement specifier, encoded in “immh”:

| immh | <Ta> |
|------|--|
| 0000 | SEE Advanced SIMD modified immediate |
| 0001 | 8H |
| 001x | 4S |
| 01xx | 2D |
| 1xxx | RESERVED |

<Vn>

Is the name of the SIMD&FP source register, encoded in the “Rn” field.

<Tb>

Is an arrangement specifier, encoded in “immh:Q”:

| immh | Q | <Tb> |
|------|---|--|
| 0000 | x | SEE Advanced SIMD modified immediate |
| 0001 | 0 | 8B |
| 0001 | 1 | 16B |
| 001x | 0 | 4H |
| 001x | 1 | 8H |
| 01xx | 0 | 2S |
| 01xx | 1 | 4S |
| 1xxx | x | RESERVED |

Operation

The description of [SSHLL, SSHLL2](#) gives the operational pseudocode for this instruction.

Operational information

If PSTATE.DIT is 1:

- The execution time of this instruction is independent of:
 - The values of the data supplied in any of its registers.
 - The values of the NZCV flags.
- The response of this instruction to asynchronous exceptions does not vary based on:
 - The values of the data supplied in any of its registers.
 - The values of the NZCV flags.
