

## GICD\_IIDR, Distributor Implementer Identification Register

The GICD\_IIDR characteristics are:

### Purpose

Provides information about the implementer and revision of the Distributor.

### Configuration

This register is available in all configurations of the GIC. If the GIC implementation supports two Security states, this register is Common.

### Attributes

GICD\_IIDR is a 32-bit register.

### Field descriptions

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
ProductID								RES0		Variant		Revision		Implementer																	

#### ProductID, bits [31:24]

Product Identifier.

This field has an implementation defined value.

Access to this field is **RO**.

#### Bits [23:20]

Reserved, res0.

#### Variant, bits [19:16]

Variant number. Typically, this field is used to distinguish product variants, or major revisions of a product.

This field has an implementation defined value.

Access to this field is **RO**.

**Revision, bits [15:12]**

Revision number. Typically, this field is used to distinguish minor revisions of a product.

This field has an implementation defined value.

Access to this field is **RO**.

**Implementer, bits [11:0]**

Contains the JEP106 code of the company that implemented the Distributor:

- Bits [11:8] are the JEP106 continuation code of the implementer. For an Arm implementation, this field is 0x4.
- Bit [7] is always 0.
- Bits [6:0] are the JEP106 identity code of the implementer. For an Arm implementation, bits [7:0] are therefore 0x3B.

**Accessing GICD\_IIDR**

**GICD\_IIDR can be accessed through the memory-mapped interfaces:**

Component	Frame	Offset	Instance
GIC Distributor	Dist_base	0x0008	GICD_IIDR

Accesses on this interface are **RO**.
