

MDCCINT_EL1, Monitor DCC Interrupt Enable Register

The MDCCINT_EL1 characteristics are:

Purpose

Enables interrupt requests to be signaled based on the DCC status flags.

Configuration

AArch64 System register MDCCINT_EL1 bits [31:0] are architecturally mapped to AArch32 System register [DBGDCCINT\[31:0\]](#).

Attributes

MDCCINT_EL1 is a 64-bit register.

Field descriptions

63	62	61	60	59	58	57	56	55	54	53	52	51	50	49	48	47	46	45	44	43	42	41	40	39	38	37	36	35	34	33	32
RES0

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

Bits [63:31]

Reserved, res0.

RX, bit [30]

DCC interrupt request enable control for DTRRX. Enables a common **COMMIQ** interrupt request to be signaled based on the DCC status flags.

RX	Meaning
0b0	No interrupt request generated by DTRRX.
0b1	Interrupt request will be generated on <code>RXfull == 1</code> .

If legacy **COMMRX** and **COMMTX** signals are implemented, then these are not affected by the value of this bit.

The reset behavior of this field is:

- On a Warm reset, this field resets to 0.

TX, bit [29]

DCC interrupt request enable control for DTRTX. Enables a common **COMMIRQ** interrupt request to be signaled based on the DCC status flags.

TX	Meaning
0b0	No interrupt request generated by DTRTX.
0b1	Interrupt request will be generated on TXfull == 0.

If legacy **COMMRX** and **COMMTX** signals are implemented, then these are not affected by the value of this bit.

The reset behavior of this field is:

- On a Warm reset, this field resets to 0.

Bits [28:0]

Reserved, res0.

Accessing MDCCINT_EL1

Accesses to this register use the following encodings in the System register encoding space:

MRS <Xt>, MDCCINT_EL1

op0	op1	CRn	CRm	op2
0b10	0b000	0b0000	0b0010	0b000

```
if PSTATE.EL == EL0 then
