

APIBKeyLo_EL1, Pointer Authentication Key B for Instruction (bits[63:0])

The APIBKeyLo_EL1 characteristics are:

Purpose

Holds bits[63:0] of key B used for authentication of instruction pointer values.

Note

The term APIBKey_EL1 is used to describe the concatenation of [APIBKeyHi_EL1](#): [APIBKeyLo_EL1](#).

Configuration

This register is present only when FEAT_PAuth is implemented. Otherwise, direct accesses to APIBKeyLo_EL1 are undefined.

Attributes

APIBKeyLo_EL1 is a 64-bit register.

Bits [63:0]

64 bit value, bits[63:0] of the 128 bit pointer authentication key value.

The reset behavior of this field is:

- On a Warm reset, this field resets to an architecturally unknown value.

Accessing APIBKeyLo_EL1

Accesses to this register use the following encodings in the System register encoding space:
