Pseu

SUNPK

Unpack and sign-extend multi-vector elements

Unpack elements from one or two source vectors and then sign-extend them to place in elements of twice their size within the two or four destination vectors.

This instruction is unpredicated.

It has encodings from 2 classes: Two registers and Four registers

Two registers (FEAT SME2)

```
31 30 29 28 27 26 25 24 23 22 21 20 19 18 17 16 15 14 13 12 11 10 9 8 7 6 5 4 3 2 1 0 1 1 1 0 0 0 0 0 0 1 size 1 0 0 1 0 1 1 1 1 1 0 0 0 0 Zn Zd Zd
```

```
SUNPK { <Zd1>.<T>-<Zd2>.<T> }, <Zn>.<Tb>
```

```
if !HaveSME2() then UNDEFINED;
if size == '00' then UNDEFINED;
constant integer esize = 8 << UInt(size);
integer n = UInt(Zn);
integer d = UInt(Zd:'0');
constant integer nreg = 2;
boolean unsigned = FALSE;</pre>
```

Four registers (FEAT_SME2)

```
31 30 29 28 27 26 25 24 23 22 21 20 19 18 17 16 15 14 13 12 11 10 9 8 7 6 5 4 3 2 1 0 1 1 0 0 0 0 0 0 1 size 1 1 0 1 0 1 1 1 1 0 0 0 0 Zn 0 Zd 0 0
```

```
SUNPK { \langle Zd1 \rangle. \langle T \rangle - \langle Zd4 \rangle. \langle T \rangle }, { \langle Zn1 \rangle. \langle Tb \rangle - \langle Zn2 \rangle. \langle Tb \rangle }
```

```
if !HaveSME2() then UNDEFINED;
if size == '00' then UNDEFINED;
constant integer esize = 8 << UInt(size);
integer n = UInt(Zn:'0');
integer d = UInt(Zd:'00');
constant integer nreg = 4;
boolean unsigned = FALSE;</pre>
```

Assembler Symbols

<Zd1>

For the two registers variant: is the name of the first destination scalable vector register of a multi-vector sequence, encoded as "Zd" times 2.

For the four registers variant: is the name of the first destination scalable vector register of a multi-vector sequence, encoded as "Zd" times 4.

<T>

Is the size specifier, encoded in "size":

size	<t></t>
0.0	RESERVED
01	Н
10	S
11	D

<Zd4>

Is the name of the fourth destination scalable vector register of a multi-vector sequence, encoded as "Zd" times 4 plus 3.

<Zn1>

Is the name of the first scalable vector register of a multivector sequence, encoded as "Zn" times 2.

<Zd2>

Is the name of the second destination scalable vector register of a multi-vector sequence, encoded as "Zd" times 2 plus 1.

<Zn>

Is the name of the source scalable vector register, encoded in the "Zn" field.

<Tb>

Is the size specifier, encoded in "size":

size	<tb></tb>
00	RESERVED
01	В
10	Н
11	S

<Zn2>

Is the name of the second scalable vector register of a multi-vector sequence, encoded as "Zn" times 2 plus 1.

Operation

```
CheckStreamingSVEEnabled();
constant integer VL = CurrentVL;
constant integer elements = VL DIV esize;
constant integer hsize = esize DIV 2;
constant integer sreg = nreg DIV 2;
array [0..3] of bits(VL) results;

for r = 0 to sreg-1
    bits(VL) operand = Z[n+r, VL];
    for i = 0 to 1
        for e = 0 to elements-1
            bits(hsize) element = Elem[operand, i*elements + e, hsize];
            Elem[results[2*r+i], e, esize] = Extend(element, esize, unservice)
```

```
for r = 0 to nreg-1
    Z[d+r, VL] = results[r];
```

Operational information

If PSTATE.DIT is 1:

- The execution time of this instruction is independent of:
 - The values of the data supplied in any of its registers.
 - The values of the NZCV flags.
- The response of this instruction to asynchronous exceptions does not vary based on:
 - The values of the data supplied in any of its registers.
 - The values of the NZCV flags.
