ADD (vector)

Add (vector). This instruction adds corresponding elements in the two source SIMD&FP registers, places the results into a vector, and writes the vector to the destination SIMD&FP register.

Depending on the settings in the *CPACR_EL1*, *CPTR_EL2*, and *CPTR_EL3* registers, and the current Security state and Exception level, an attempt to execute the instruction might be trapped.

It has encodings from 2 classes: Scalar and Vector

Scalar

```

```

ADD <V><d>, <V><n>, <V><m>

```
integer d = UInt(Rd);

integer m = UInt(Rm);
if size != '11' then UNDEFINED;
constant integer esize = 8 << UInt(size);
constant integer datasize = esize;
integer elements = 1;
boolean sub_op = (U == '1');</pre>
```

Vector

Assembler Symbols

Is a width specifier, encoded in "size":

size	<v></v>	
0x	RESERVED	
10	RESERVED	
11	D	

<d> Is the number of the SIMD&FP destination register, in the

"Rd" field.

<n> Is the number of the first SIMD&FP source register,

encoded in the "Rn" field.

<m> Is the number of the second SIMD&FP source register,

encoded in the "Rm" field.

<Vd>Is the name of the SIMD&FP destination register, encoded

in the "Rd" field.

<T> Is an arrangement specifier, encoded in "size:Q":

size	Q	<t></t>
0.0	0	8B
00	1	16B
01	0	4H
01	1	8H
10	0	2S
10	1	4S
11	0	RESERVED

<Vn> Is the name of the first SIMD&FP source register, encoded in the "Rn" field.

<Vm> Is the name of the second SIMD&FP source register, encoded in the "Rm" field.

Operation

```
CheckFPAdvSIMDEnabled64();
bits(datasize) operand1 = \underline{V}[n, datasize];
bits(datasize) operand2 = V[m, datasize];
bits(datasize) result;
bits(esize) element1;

for e = 0 to elements-1
    element1 = Elem[operand1, e, esize];
    element2 = Elem[operand2, e, esize];
    if sub_op then

Operational information

If PSTATE.DIT is 1:

- The execution time of this instruction is independent of:
 - The values of the data supplied in any of its registers.
 - The values of the NZCV flags.
- The response of this instruction to asynchronous exceptions does not vary based on:
 - The values of the data supplied in any of its registers.
 - The values of the NZCV flags.
