ID_PFR2_EL1, AArch32 Processor Feature Register 2

The ID PFR2 EL1 characteristics are:

Purpose

Gives information about the AArch32 programmers' model.

Must be interpreted with ID PFR0 EL1 and ID PFR1 EL1.

For general information about the interpretation of the ID registers see 'Principles of the ID scheme for fields in ID registers'.

Configuration

AArch64 System register ID_PFR2_EL1 bits [31:0] are architecturally mapped to AArch32 System register ID_PFR2[31:0].

Attributes

ID_PFR2_EL1 is a 64-bit register.

Field descriptions

When AArch32 is supported:

63 62 61 60 59 58 57 56 55 54 53 52 51 50 49 48 47 46 45 44 43 42 41 40 39 38 37 36 35 34 33 32

RES0											
RES0	RAS	fra	С		SSE	35			CS	V3	
31 30 29 28 27 26 25 24 23 22 21 20 19 18 17 16 15 14 13 12	11 10	9	8	7	6	5	4	3	2	1	0

Bits [63:12]

Reserved, res0.

RAS frac, bits [11:8]

RAS Extension fractional field. Defined values are:

Meaning
If <u>ID_PFR0_EL1</u> .RAS ==
0b0001, RAS Extension implemented.

0b0001	If <u>ID_PFR0_EL1</u> .RAS == 0b0001, as 0b0000 and adds
	support for additional
	ERXMISC <m> System</m>
	registers.
	Error records accessed
	through System registers
	conform to RAS System
	Architecture v1.1, which
	includes simplifications to
	ERR <n>STATUS and</n>
	support for the optional RAS Timestamp Extension.

All other values are reserved.

This field is valid only if <u>ID PFR0 EL1</u>.RAS == 0b0001.

SSBS, bits [7:4]

Speculative Store Bypassing controls in AArch64 state. Defined values are:

SSBS	Meaning
0b0000	AArch32 provides no
	mechanism to control the use of
	Speculative Store Bypassing.
0b0001	AArch32 provides the
	PSTATE.SSBS mechanism to
	mark regions that are
	Speculative Store Bypass Safe.

In Armv8.0, the permitted values are 0b0000 and 0b0001.

From Armv8.5, the only permitted value is 0b0001.

All other values are reserved.

CSV3, bits [3:0]

Speculative use of faulting data. Defined values are:

|--|

0b0000	This PE does not disclose whether data loaded under speculation with a permission or domain fault can be used to form an address or generate condition codes or SVE predicate values to be used by other instructions in the speculative sequence.
0b0001	Data loaded under speculation with a permission or domain fault cannot be used to form an address, generate condition codes, or generate SVE predicate values to be used by other instructions in the speculative sequence. The execution timing of any other instructions in the speculative sequence is not a function of the data loaded under speculation.

All other values are reserved.

FEAT_CSV3 implements the functionality identified by the value 0b0001.

In Armv8.0, the permitted values are 0b0000 and 0b0001.

From Armv8.5, the only permitted value is 0b0001.

If FEAT EOPD is implemented, FEAT CSV3 must be implemented.

Otherwise:

63 62 61 60 59 58 57 56 55 54 53 5	2 51 50 49 48 47 46 45	44 43 42 41	40 39	38 3	37 36	35	34 3	33	32
	UNKNOWN								
	UNKNOWN								
21 20 20 29 27 26 25 24 22 22 21 2	0 10 10 17 16 15 1/ 12	12 11 10 0	0 7		5 /		<u> </u>	1	$\overline{}$

Bits [63:0]

Reserved, unknown.

Accessing ID_PFR2_EL1

Accesses to this register use the following encodings in the System register encoding space:

MRS <Xt>, ID PFR2 EL1

op0	op1	CRn	CRm	op2
0b11	0b000	0b0000	0b0011	0b100

```
if PSTATE.EL == ELO then
    if IsFeatureImplemented(FEAT_IDST) then
        if EL2Enabled() && HCR_EL2.TGE == '1' then
            AArch64.SystemAccessTrap(EL2, 0x18);
        else
            AArch64.SystemAccessTrap(EL1, 0x18);
    else
        UNDEFINED;
elsif PSTATE.EL == EL1 then
    if EL2Enabled() && HCR EL2.TID3 == '1' then
        AArch64.SystemAccessTrap(EL2, 0x18);
    else
        X[t, 64] = ID_PFR2_EL1;
elsif PSTATE.EL == EL2 then
    X[t, 64] = ID_PFR2_EL1;
elsif PSTATE.EL == EL3 then
    X[t, 64] = ID_PFR2_EL1;
```
