# **ADDP** (scalar)

Add Pair of elements (scalar). This instruction adds two vector elements in the source SIMD&FP register and writes the scalar result into the destination SIMD&FP register.

Depending on the settings in the *CPACR\_EL1*, *CPTR\_EL2*, and *CPTR\_EL3* registers, and the current Security state and Exception level, an attempt to execute the instruction might be trapped.

## ADDP <V><d>, <Vn>.<T>

```
integer d = UInt(Rd);
integer n = UInt(Rn);

if size != '11' then UNDEFINED;

constant integer esize = 8 << UInt(size);
constant integer datasize = esize * 2;</pre>
```

# **Assembler Symbols**

<V>

Is the destination width specifier, encoded in "size":

size	<v></v>
0x	RESERVED
10	RESERVED
11	D

<d>

Is the number of the SIMD&FP destination register, encoded in the "Rd" field.

<Vn>

Is the name of the SIMD&FP source register, encoded in the "Rn" field.

<T>

Is the source arrangement specifier, encoded in "size":

size	<t></t>
0x	RESERVED
10	RESERVED
11	2D

## **Operation**

```
CheckFPAdvSIMDEnabled64();
bits(datasize) operand = V[n, datasize];
V[d, esize] = Reduce(ReduceOp_ADD, operand, esize);
```

#### **Operational information**

## If PSTATE.DIT is 1:

- The execution time of this instruction is independent of:
  - The values of the data supplied in any of its registers.
  - The values of the NZCV flags.
- The response of this instruction to asynchronous exceptions does not vary based on:
  - The values of the data supplied in any of its registers.
  - The values of the NZCV flags.
