External Registers

OSDTRTX_EL1, OS Lock Data Transfer Register, Transmit

The OSDTRTX EL1 characteristics are:

Purpose

Used for save/restore of <u>DBGDTRTX_ELO</u>. It is a component of the Debug Communications Channel.

Configuration

AArch64 System register OSDTRTX_EL1 bits [31:0] are architecturally mapped to AArch32 System register <u>DBGDTRTXext[31:0]</u>.

Attributes

OSDTRTX EL1 is a 64-bit register.

Bits [63:32]

Reserved, res0.

Bits [31:0]

Return DTRTX without side-effect.

Reads of this register return the value in DTRTX and do not change TXfull.

Writes of this register update the value in DTRTX and do not change TXfull.

For the full behavior of the Debug Communications Channel, see 'The Debug Communication Channel and Instruction Transfer Register'.

Accessing OSDTRTX EL1

Arm deprecates reads and writes of OSDTRTX_EL1 when the OS Lock is unlocked.

Accesses to this register use the following encodings in the System register encoding space:
