ERXPFGCDN_EL1, Selected Pseudo-fault Generation Countdown Register

The ERXPFGCDN EL1 characteristics are:

Purpose

Accesses <u>ERR<n>PFGCDN</u> for the error record <n> selected by <u>ERRSELR_EL1</u>.SEL.

Configuration

This register is present only when FEAT_RASv1p1 is implemented. Otherwise, direct accesses to ERXPFGCDN EL1 are undefined.

Attributes

ERXPFGCDN EL1 is a 64-bit register.

Field descriptions

63 62 61 60 59 58 57 56 55 54 53 52 51 50 49 48 47 46 45 44 43 42 41 40 39 38 37 36 35 34 33 32

Bits [63:0]

ERXPFGCDN_EL1 accesses <u>ERR<n>PFGCDN</u>, where <n> is the value in <u>ERRSELR EL1</u>.SEL.

Accessing ERXPFGCDN_EL1

If <u>ERRIDR_EL1</u>.NUM is 0x0000 or <u>ERRSELR_EL1</u>.SEL is greater than or equal to <u>ERRIDR_EL1</u>.NUM, then one of the following occurs:

- An unknown error record is selected.
- ERXPFGCDN EL1 is RAZ/WI.
- Direct reads and writes of ERXPFGCDN EL1 are NOPs.
- Direct reads and writes of ERXPFGCDN EL1 are undefined.

If <u>ERRSELR_EL1</u>.SEL selects an error record owned by a node that does not implement the Common Fault Injection Model Extension, then one of the following occurs:

• ERXPFGCDN EL1 is RAZ/WI.

- Direct reads and writes of ERXPFGCDN EL1 are NOPs.
- Direct reads and writes of ERXPFGCDN EL1 are undefined.

Note

A node does not implement the Common Fault Injection Model Extension if ERR < q > FR.INJ reads as 0b00. < q > is the index of the first error record owned by the same node as error record < n >, where < n > is the value in $ERRSELR_EL1$.SEL. If the node owns a single record then q = n.

If <u>ERRSELR_EL1</u>.SEL is not the index of the first error record owned by a node, then <u>ERR<n>PFGCDN</u> is not present, meaning reads and writes of ERXPFGCDN EL1 are res0.

<u>ERR<n>PFGCDN</u> describes additional constraints that also apply when <u>ERR<n>PFGCDN</u> is accessed through ERXPFGCDN_EL1.

Accesses to this register use the following encodings in the System register encoding space:

MRS <Xt>, ERXPFGCDN EL1
