## **SMINQV**

Signed minimum reduction of quadword vector segments

Signed minimum of the same element numbers from each 128-bit source vector segment, placing each result into the corresponding element number of the 128-bit SIMD&FP destination register. Inactive elements in the source vector are treated as the maximum signed integer for the element size.

# SVE2 (FEAT\_SVE2p1)

```
31 30 29 28 27 26 25 24 23 22 21 20 19 18 17 16 15 14 13 12 11 10 9 8 7 6 5 4 3 2 1 0 0 0 0 0 0 1 0 0 size 0 0 1 1 1 0 0 0 1 Pg Zn Vd
```

```
SMINQV <Vd>.<T>, <Pg>, <Zn>.<Tb>
```

```
if !HaveSVE2p1() && !HaveSME2p1() then UNDEFINED;
constant integer esize = 8 << UInt(size);
integer g = UInt(Pg);
integer n = UInt(Zn);
integer d = UInt(Vd);
boolean unsigned = FALSE;</pre>
```

#### **Assembler Symbols**

<Vd> Is the name of the destination SIMD&FP register, encoded in the "Vd" field.

Is an arrangement specifier, encoded in "size":

size	<t></t>
0 0	16B
01	8H
10	4S
11	2D

<Pg> Is the name of the governing scalable predicate register P0-P7, encoded in the "Pg" field.

<Zn> Is the name of the source scalable vector register, encoded in the "Zn" field.

Is the size specifier, encoded in "size":

size	<tb></tb>
0.0	В
01	Н
10	S
11	D

### **Operation**

```
CheckSVEEnabled();
constant integer VL = CurrentVL;
constant integer PL = VL DIV 8;
constant integer segments = VL DIV 128;
constant integer elempersegment = 128 DIV esize;
bits(PL) mask = P[g, PL];
bits (VL) operand = if \underline{AnyActiveElement} (mask, esize) then \underline{Z}[n, VL] else
bits (128) result = Zeros(128);
bits (128) stmp = \frac{Zeros}{(128)};
integer dtmp;
for e = 0 to elempersegment-1
    dtmp = if unsigned then (2^esize - 1) else (2^(esize-1) - 1);
    for s = 0 to segments-1
        if ActivePredicateElement(mask, s * elempersegment + e, esize)
             stmp = Elem[operand, s, 128];
             dtmp = Min(dtmp, SInt(Elem[stmp, e, esize]));
    Elem[result, e, esize] = dtmp<esize-1:0>;
V[d, 128] = result;
```

#### **Operational information**

If PSTATE.DIT is 1:

- The execution time of this instruction is independent of:
  - The values of the data supplied in any of its operand registers when its governing predicate register contains the same value for each execution.
  - The values of the NZCV flags.
- The response of this instruction to asynchronous exceptions does not vary based on:
  - The values of the data supplied in any of its operand registers when its governing predicate register contains the same value for each execution.
  - The values of the NZCV flags.
