TRCSEQSTR, Sequencer State Register

The TRCSEQSTR characteristics are:

Purpose

Use this to set, or read, the Sequencer state.

Configuration

AArch64 System register TRCSEQSTR bits [31:0] are architecturally mapped to External register TRCSEQSTR[31:0].

This register is present only when FEAT_ETE is implemented, FEAT_TRC_SR is implemented and TRCIDR5.NUMSEQSTATE != 0b000. Otherwise, direct accesses to TRCSEQSTR are undefined.

Attributes

TRCSEQSTR is a 64-bit register.

Bits [63:2]

Reserved, res0.

STATE, bits [1:0]

Set or returns the state of the Sequencer.

STATE	Meaning
0b00	State 0.
0b01	State 1.
0b10	State 2.
0b11	State 3.

The reset behavior of this field is:

- On a Trace unit reset, this field resets to an architecturally unknown value.

Accessing TRCSEQSTR

Must be programmed if TRCRSCTLR<a>.GROUP == 0b0010 and TRCRSCTLR<a>.SEQUENCER != 0b0000.

Writes are constrained unpredictable if the trace unit is not in the Idle state.

Reads from this register might return an unknown value if the trace unit is not in either of the Idle or Stable states.

Accesses to this register use the following encodings in the System register encoding space:

MRS <Xt>, TRCSEQSTR
